

Our Plan

100% transferable college credit to any 4-year University within Texas. Voting against the increase in property taxes. Expand workforce development courses and adding workforce advisers to help students find careers. Simplifying registration for veteran's, expanding on Military accreditation and offer more military friendly programs. Parents & taxpayers involved in the decision-making process.

I believe education begins with the answer of our families' voices. It feels like when educational institutions provide a variety of ways for parents to offer feedback and suggestions. Building a genuine two-way relationship between our educational institutions and families is vital. We need to give families the opportunities to be heard. We need to build strong relationships with our families through effective communication. We can't just expect our families to only listen. Too often, schools establish one-way communication which leads to more challenges. As educational institutions, we don't have all the answers. With the involvement of our Board, staff, and parents we can create the best quality of education ever. If we continue this assumption of one-way communication it only leads to lopsided conversations, missing out on important information, and other times confusion on decisions made. To accomplish a more fluid conversation, I believe the best way is to ensure an open dialogue and not just a one-sided school monologue.

Many students struggle at the last minute to find textbooks for their classes. On top of the tuition, some classes require students to buy additional books. Adding hundreds annually in additional costs. When elected, I would propose that textbooks to be included in the tuition via ebooks, including accessible books for rent at libraries for students to use. The professors already have an individual copy with materials for their class. In doing so, I would recommend the tuition rate to stay the same and not increase. Some professors have written their curriculum text for the course in which they require students to pay for the text. I would ask if these texts could be posted on the syllabus, and or copies be available in the library. In doing so this helps with the level of stress, anxiety and saving money for our students at Alamo Colleges.

The environment is important we want to preserve our environment on our campuses. Planting native species of plants on colleges in which they would grow beautifully in the Texas climate would save cost on the usage of water. Not only that, having landscaping to furnish the grass we have which doesn't grow well in Texas climate costs a lot to maintain. We want to be cost-effective and preserve our environment.
